MARAMA Information

Biographies of the Instructors:

Paul Heishman

Paul has been with the Resource Center Air Quality Team at FHWA for over five years, where he has a focus on project-level studies. Prior to that, he had worked as a consultant for about 30 years, the last 20 years in private practice. He has specialized in project-level studies of noise and air quality. Recognizing the importance of developing good traffic inputs for these analyses, he enrolled in a PhD program in transportation planning and engineering at the University of Maryland. He completed all of the coursework and began work on his dissertation before his academics were interrupted by his consulting workload (in part, a product of the Clean Air Act Amendments of 1990). He has a bachelor's degree in the liberal arts (Dickinson College) and a master's degree in environmental planning (Shippensburg State College). He is a Professional Engineer, licensed in PA and MD.
